

Cast with Confidence

Avtek Super Ring™

Ringless Casting System

Super Ring saves time, money, and increases productivity by allowing the technician to economically achieve consistent, accurate results.

The red, plastic rings permit equal expansion in all directions during setting of the investment, and allow gases to escape during burnout, producing superior quality castings with perfect fit and accurate margins. The ringless system eliminates ring liners and dig out procedures entirely.

Super Rings are durable, reusable, and slightly tapered for easy mold removal. For maximum casting versatility, the Super Ring system is available in four size rounds and two size oval rings.
