Plastic Sprue Bars

Clear Acrylic Rods for Precision Spruing

Used as a runner bar for round house and long span bridges, Avtek low carbon, clear acrylic sprue bars can be warmed over burner and bent to desired shape to fit the arch.

The clear plastic sprues have no memory, retaining shape when cooled. Avtek Plastic Sprue Bars prevent distortion of bridgework during investing and burn out clean and residue free. Available in 6 and 8 gauge, the rods are available in packages of 30.

All Avtek products are satisfaction guaranteed and are also available through your dental dealer.
